

Contributions to Health and Beauty

We research, develop, manufacture, and sell various medical devices, health devices and beauty devices based on themes of “electrostimulation” and “vital responses.”

 株式会社 ホーマイオン研究所

Introduction to Products Already Deployed or Considered for Deployment Overseas

Medical EMS Low-frequency therapeutic device “G-TES”

The world's only belt electrode EMS for muscle training of all lower limbs. Capable of assisting exercise by patients with impeded movement, there is ample evidence showing that this promotes muscle development and metabolism. It is currently used in more than 700 facilities in the orthopedic, rehabilitation, dialysis, ICU, care fields, etc. throughout Japan.
