

Technical prowess you can trust. Contributing to medical care through forceps made in Japan

Utilizing technical prowess honed over many years, we manufacture custom-made products that meet the needs of medical care settings

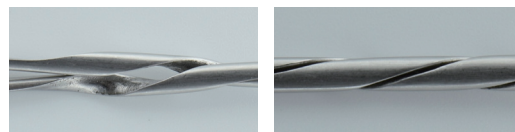

Introduction to Products Already Deployed or Considered for Deployment Overseas

New types of forceps using our original "twist" feature

- By using "twists" in place of attachments, our forceps have no unnecessary protrusions that could damage endoscopic instruments.
- Because forceps can be disassembled and washed, sanitation is enhanced.

Utilizing this "twist" feature, we can make various types of products according to needs on the ground.

Your Company's Top 3 Strengths

- 1 Responsiveness to diverse needs based on high-level technical prowess
- 2 Stable high-level quality Sharpness, user-friendliness, smooth movement
- 3 Durability Resistant to breakage and long-lasting
