

Designing Strategy for Medical Device Development

Successfully guiding MedTech innovation.

Medical device professionals

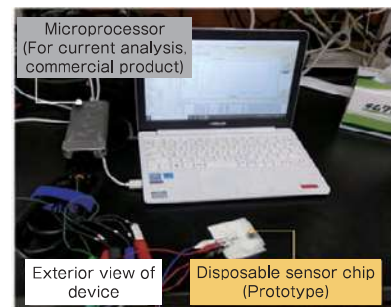

Experts group of addressing medical device business

Introduction to products already deployed or considered for deployment overseas

Development of the TDM Disposable Sensor for Addressing the Issue of Antimicrobial Resistance (AMR)

Therapeutic drug monitoring (TDM), which monitors blood concentrations and plans dosing regimens, is essential for the safe and effective therapeutic use of drugs, which may easily lead to drug resistance. However, many countries are unable to use TDM because of their inability to purchase devices that measure drug concentrations, owing to the high costs of the device and the complexity of the measurement process.

This product is an affordable disposable sensor that enables TDM in real time.

For inquiries or business meetings

- Medical device manufacturers
- Medical device distributors
- Companies, researchers, and physicians requiring development support
- Medical-engineering promotion offices in universities

Contact Person : Kumi Sakurai, CEO

Top 5 strengths of our company

New business development and product commercialization support for medical, healthcare and assistive devices

- 1 Market research
- 2 Consulting
- 3 Practical support (regulatory affairs, insurance reimbursement, QMS, marketing)
- 4 Operation of accelerator programs
- 5 Partnerships with universities, hospitals, and medical practices

Why we are chosen

- 1 Business experience in the medical device industry
- 2 Active incubation of good seeds
- 3 Domestic and overseas networks

Why we are trusted

- 1 Tailored support for customers
- 2 Specialization
- 3 Consulting experience

Company Information

Company Name : Premo Partners, Inc.

Address : #601, 3-11-5 Nihonbashi

Honcho, Chuo-ku, Tokyo

103-0023, Japan

TEL/FAX : +81-3-6661-2590
